By Graham Walton : University Libraries and Space in the Digital World library facilities and services catalogs electronic resources and research information welcome back students consider the libraries your home for learning and inspiration create something innovative in the fablab seek support and advice in the University Libraries and Space in the Digital World:

This timely book addresses physical space in university libraries in the digital age. It considers the history of the use of space, integrates case studies from around the world with theoretical perspectives, explores recent developments including new build and refurbishment. With users at the forefront, chapters cover different aspects of learning and research support, provision, shared services, and evaluation of space initiatives. Library staff requirements and green issues are also covered. This is a timely and very useful work. Through its breadth, it manages to consider comprehensively the full spectrum of issues which we as librarians face when dealing with our beloved and occasionally beleaguered physical space. It should prove of value to them.
